

Thun Tankers adds niche port max sized tanker - increases partnership with Wisby Tankers

We are pleased to announce that Thun Tankers will strengthen the existing fleet with m/t Wisby Argan. The Wisby Tanker owned vessel will enter into the Gothia Tanker Alliance network with immediate effect and will be the fourth Wisby Tanker owned product tanker commercially managed by Thun Tankers.

The highly maneuverable, 7,000 deadweight, tanker has been tailor designed to maximize deliveries into restricted ports. With an overall length of 99.9 meters the vessel is able to reach smaller load and discharge installations. The Wisby Argan is an identical sister to Wisby Teak, already trading in the Gothia Tankers network. With two identical sisters, we can further increase a reliable and flexible logistic in the small niche sized segment of coastal tankers.

“With Wisby Argan in our fleet we can further increase our client offering with another modern high quality tanker that is able to carry all sorts of biofuels and reach ports and terminals with restricted accessibility.”

–Joakim Lund, CCO, Thun Tankers

“With this fourth added tanker we do not only deepen our good co-operation further with Thun Tankers and the rest of the partners in the Gothia Tanker Alliance, we can also widen the joint offering towards the customers.”

–Jonas Engström, Managing Director, Wisby Tankers
